1 Introduction	1
2 Travel demand	4
2.1 Aggregate tabulations and models 5	
2.1.1 Aggregate demand models 6	
2.1.2 Cross-sectional studies of metropolitan areas 8	
2.1.3 Cross-sectional studies within a metropolitan area 9	
2.1.4 Studies using time-series data 10	
2.1.5 Summary of key results of aggregate studies 11	
2.1.6 Transportation and land use 12	
2.2 Disaggregate models: methods 15	
2.2.1 Basic discrete-choice models 15	
2.2.2 Estimation 17	
2.2.3 Interpreting coefficient estimates 19	
2.2.4 Data 21	
2.2.5 Randomness, scale of utility, and measures of benefit 23	
2.2.6 Aggregation and forecasting 25	
2.2.7 Specification 26	
2.2.8 Ordered and rank-ordered models 27	
2.3 Disaggregate models: examples 28	
2.3.1 Mode choice 28	
2.3.2 Trip-scheduling choice 29	
2.3.3 Choice of free or express lanes 31	
2.4 Advanced discrete-choice modeling 33	
2.4.1 Generalized extreme value models 33	
2.4.2 Combined discrete and continuous choice 36	
2.4.3 Disaggregate panel data 38	
2.4.4 Random parameters and mixed logit 39	
2.4.5 Endogenous prices 41	

2.5	Activity patterns and trip chaining	43
2.6	Value of time and reliability	44
2.6.1	<i>Value of time: basic theory</i>	45
2.6.2	<i>Empirical specifications</i>	46
2.6.3	<i>Extensions</i>	47
2.6.4	<i>Value of reliability: theory</i>	49
2.6.5	<i>Empirical results</i>	52
2.7	Conclusions	54
3	Costs	56
3.1	The nature of cost functions	56
3.2	Cost functions for public transit	61
3.2.1	<i>Accounting cost studies</i>	62
3.2.2	<i>Engineering cost studies</i>	64
3.2.3	<i>Statistical cost studies</i>	65
3.2.4	<i>Cost functions including user inputs</i>	67
3.3	Highway travel: congestion technology	69
3.3.1	<i>Fundamentals of congestion</i>	69
3.3.2	<i>Empirical speed-flow relationships</i>	72
3.3.3	<i>Dynamic congestion models</i>	78
3.3.4	<i>Congestion modeling: a conclusion</i>	83
3.4	Highway travel: short-run cost functions and equilibrium	83
3.4.1	<i>Stationary-state congestion on a homogeneous road</i>	84
3.4.2	<i>Time-averaged models</i>	86
3.4.3	<i>Dynamic models with endogenous scheduling</i>	88
3.4.4	<i>Network equilibrium</i>	93
3.4.5	<i>Parking search</i>	96
3.4.6	<i>Empirical evidence on short-run variable costs</i>	97
3.5	Highway travel: long-run cost functions	105
3.5.1	<i>Analytic long-run cost functions</i>	106
3.5.2	<i>The role of information technology</i>	109
3.5.3	<i>Empirical evidence on capital costs</i>	111
3.5.4	<i>Is highway travel subsidized?</i>	114
3.6	Intermodal cost comparisons	115
3.7	Conclusions	117
4	Pricing	119
4.1	First-best congestion pricing of highways	120
4.1.1	<i>Static congestion</i>	121
4.1.2	<i>Dynamic congestion</i>	127
4.2	Second-best pricing	137
4.2.1	<i>Network aspects</i>	139
4.2.2	<i>Time-of-day aspects</i>	143
4.2.3	<i>User heterogeneity</i>	145
4.2.4	<i>Stochastic congestion and information</i>	146

4.2.5	<i>Interactions with other distorted markets</i>	146
4.2.6	<i>Second-best pricing: a conclusion</i>	147
4.3	Congestion pricing in practice	148
4.3.1	<i>Singapore</i>	148
4.3.2	<i>Norwegian toll rings</i>	149
4.3.3	<i>Value pricing in the US</i>	149
4.3.4	<i>London congestion charging</i>	150
4.3.5	<i>Other applications</i>	151
4.3.6	<i>Technology of road pricing</i>	151
4.4	Pricing of parking	153
4.5	Pricing of public transit	155
4.5.1	<i>Fare level</i>	155
4.5.2	<i>Fare structure</i>	159
4.5.3	<i>Incentive effects of subsidies</i>	159
4.5.4	<i>Political considerations</i>	160
4.6	Conclusions	161
5	Investment	163
5.1	Capacity choice for highways	163
5.1.1	<i>Basic results: capacity choice with first-best pricing and static congestion</i>	164
5.1.2	<i>Self-financing in more complex settings</i>	167
5.1.3	<i>Second-best highway capacity</i>	172
5.1.4	<i>Naïve investment rules</i>	178
5.2	Cost-benefit analysis	181
5.2.1	<i>Willingness to pay</i>	181
5.2.2	<i>Demand and cost forecasts</i>	184
5.2.3	<i>Discounting future costs and benefits</i>	185
5.2.4	<i>Shifting of costs and benefits</i>	187
5.2.5	<i>External benefits and network effects</i>	187
5.2.6	<i>Conclusion: the use and misuse of cost-benefit analysis</i>	189
5.3	Conclusions	189
6	Industrial organization of transportation providers	191
6.1	Private highways	192
6.1.1	<i>Single road with static congestion</i>	192
6.1.2	<i>Single road with dynamic congestion</i>	194
6.1.3	<i>Heterogeneous users</i>	196
6.1.4	<i>Private toll lanes: the two-route problem revisited</i>	196
6.1.5	<i>Competition in networks</i>	198
6.2	Regulation and franchising of private roads	201
6.3	Privately provided transit services	203
6.3.1	<i>Forms of privatization</i>	204

6.3.2	<i>Market structure and competitive practices</i>	205
6.3.3	<i>Efficiency of public and private providers</i>	208
6.3.4	<i>Experience with privatization and deregulation</i>	209
6.3.5	<i>Paratransit</i>	212
6.3.6	<i>Conventional taxi service</i>	213
6.4	<i>Conclusions</i>	214
7	Conclusion	215
7.1	<i>Emerging themes</i>	215
7.2	<i>Implications for transportation research</i>	219
	<i>Notes</i>	221

Kenneth A. Small's *Urban Transportation Economics* went on to become the textbook on the economics of transportation. Fifteen years after its original publication, as local and national authorities are increasingly turning to economic principles to cope with urban transportation problems, a second edition could not be more timely. This time co-authored with Erik T. Verhoef, this newly expanded edition has been fully updated, covering such new areas as parking policies, reliability of travel times, and the privatization of transportation services, as well as updated treatments of congestion modeling, environmental costs, and transit subsidies.

The book covers the basic topics needed for any application of economics to transportation: forecasting the demand for transportation services under alternative policies, measuring all the costs including those incurred by users, setting prices under practical constraints, choosing and evaluating investments in basic facilities, and designing ways in which the private and public sectors interact to provide services. Among the specific new topics in this edition are statistical models that better account for the variety of types of users in assessing their demands, measurement of users' perception of reliability of service, criteria for choosing prices and investment under specified financial or practical constraints, and market structures in which private companies operate with some but not full competition.

This book will be of great interest to students with basic calculus and some knowledge of economic theory who are engaged with transportation economics, planning and/or engineering, travel demand analysis, and many related fields. It will also be essential reading for researchers in any aspect of urban transportation.

Kenneth A. Small is Research Professor and Professor Emeritus of Economics at the University of California at Irvine.

Erik T. Verhoef is Professor of Spatial Economics at VU University, Amsterdam.
